Heated part	<ul style="list-style-type: none"> <li>- Light sources</li> <li>- Ballasts</li> <li>- Transformer</li> </ul>	OSM/LUM-ETF5	2019 ETICS Plenary Meeting
<b>Question</b>			
<p>Clause 4.15 requires that covers, shades and similar parts notwithstanding the 650°C glow wire test, shall be at a distance of 30 mm from the heated part. How should we define a heated part? Is a 3 W “candle looking” glimmer lamp considered to be a heated part? If no, can we decide a limit for incandescent lamps considered to be heated parts, e.g. more than 15 W?</p>			
<b>Decision</b>			
<p>Light sources, ballasts and transformers are regarded as heated parts.</p>
