Class II luminaires for discharge lamps	<ul style="list-style-type: none"> - Constructions - Common sense - LUMEX 	OSM/LUM-ETF5	2019 ETICS Plenary Meeting
Question			
<p>Class II luminaires for discharge lamps. Attached there are two examples of class II luminaires on which it is possible to touch the ballast with the standard test finger during the normal operation of the appliances. In the second example, it is possible to touch the ballast by entering with the arm and the standard test finger into the luminaire, in normal use. What is in your opinion the test procedure? How long can the arm enter into the luminaire?</p>			
Decision			
<p>According to the present standard both constructions are not acceptable.</p>
